
Price Action Trading Trend Line Breakout Strategy

(by Albert Kuo)

僅供內部教育訓練之用，請勿外流

Introduction

- 1. This is a rule-based and objective method with clear and not ambiguous entry and exit rules.**
- 2. This strategy is as easy as pie and the tool we use is only trend lines.**
- 3. We don't use any technical indicators(neither EMA, RSI, KD nor MACD) so we don't need to optimize parameters of the indicators and have no problem of overfitting a model.**
- 4. We can use Fibonacci Retracement to decide S/L and T/P levels.**
- 5. We can use trailing stop method to capture massive moves.**
- 6. It's pretty much of a trend-reversal strategy with pretty high odds. But sometimes, it can be a trend-following strategy(Special Case 4).**
- 7. This strategy can work well in daily chart but it can also do on other time frame.**

How to Draw Valid Trend Lines

Step 1: Identify obvious peaks and troughs

Step 2A: In a downtrend(it forms lower highs, but lower lows are not necessary), connect a minimum of 3 peaks (or highs) with a line from left to right and we have a downward trend line

Step 2B: In an uptrend(it forms higher lows, but high highs are not necessary), connect a minimum of 3 troughs (or lows) with a line from left to right and we have an upward trend line

Step 3: We can draw 2 parallel lines to mark trend line(as a trend zone)

***3 Common Mistakes in Drawing Trend Lines:**

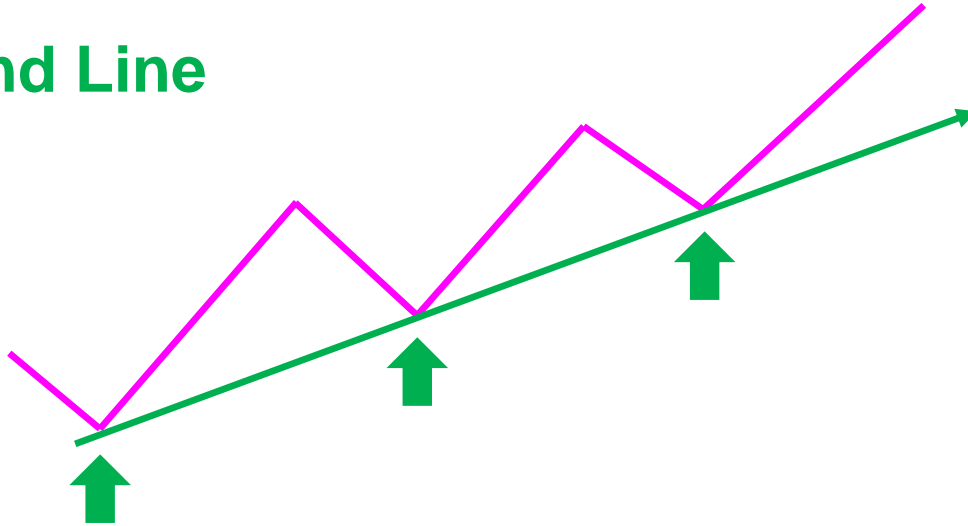

- 1. Drawing trend line through an obstruction**
- 2. Drawing through the body of a candlestick**
- 3. Not drawing a new trend line and keeping a breached trend line**

***It's acceptable that sometimes a trend line doesn't touch the wick but is very close to the end of a wick.**

***It's acceptable that sometimes a trend line is through the body of a candlestick but only a tiny part of the body.**

Entry Rules

Long Entry

Aggressive Entry: If the price closes above the last point touching the downtrend line, make a long entry.

Conservative Entry: If the price crosses above the last point touching the downtrend line and retests it, make a long entry.

Entry Rules

Short Entry

Aggressive Entry: If the price closes below the last point touching the uptrend line, make a short entry.

Conservative Entry: If the price crosses below the last point touching the uptrend line and retests it, make a short entry.

How to Set S/L Level

1. A little below/above recent swing low/high for a long/short entry
 2. If recent low/high is very far away from entry point, set Stop-Loss level at Fib. 0.382, 0.500 or 0.618
- It's even better if (1) and (2) are very close.

How to Set T/P Level

1. Counter-Trend

Because it's totally a counter-trend trade, we have no idea if the trend is really changing. So we can set T/P level at Fib. 0.382, 0.5 and 0.618, and take profit separately.

How to Set T/P Level

2. Trend-Following

Because it's a trend-following trade, we can set T/P level more aggressively. The 1st T/P level is Fib. 1.272 and the 2nd is Fib. 1.618, and we can also use trailing stop to avoid missing a big trend.
