CITI'S TAKE

The French problem is a French problem, not a European one. While French market and fundamental indicators seem very concerning, most other European countries fall far short of the market or fundamental stress observed during the European debt crisis. While some contagion is always likely, with Belgium being the second weakest link, overall stress may remain focused on France. This could still be enough to avoid the more hawkish ECB path priced. We receive ERZ7 against SFRZ7, and see a lower EUR. Equities will enter better seasonals, though the best seasonals only occur in Nov/Dec. We added equity risk in Brazil and NTNF 2031s after a very bullish election. Lower interest rates should be a catalyst for both trades. *Note: Futures trading involves substantial risk of loss.*

A French problem, not a European one – While French spreads are back to European debt crisis levels, other European stress indicators are not. Fundamentally, France and Belgium are the most vulnerable, but the vulnerability is much less than was the case for the weak European credits in 2011. Still, it is not obvious whether there can be much relief for France ahead of its election. We therefore think the ECB will not be able to fully hike in line with priced in and receive ERZ7 versus SFRZ7. We also sell EUR against a basket of G10 FX where positioning is less stretched than against the US. We also like dual digis positioning for EURUSD lower and USDKRW lower. *Note: Futures trading involves substantial risk of loss.*

Equities entering better seasonals – While there has been no pull-back ahead of US Midterms and Fed hiking cycle start so far, valuations have contracted. With positive seasonals starting (most noticeably only for Nov and Dec, though), we stay long US equities and added Brazil.

A very bullish Brazil election – As per prediction markets and polling (see "Brazil" section below), this is likely the end of the Lula era. Markets have greeted this with a strong bid for Brazilian assets across all asset classes. We were long BRL going into it and added both longs in Bovespa and NTNF 2031s (FX unhedged) post results, as the election may open the door for stronger rate cuts and higher equities, while keeping BRL strong. We think Copom will likely continue its easing cycle, which should support Bovespa. Brazilian equities have a much higher information ratio during easing cycles than hiking cycles or on hold periods.

Jevons paradox: 1 – Jobpocalypse: 0 – We update the evidence of whether AI destroys or creates jobs. At this stage, the evidence points towards job creation. Evidence of AI-related job losses is quite limited. But we need to track the story in 2027, as it is still early days.

See Appendix A-1 for Analyst Certification, Important Disclosures and Research Analyst Affiliations.

A French problem, not a European one

New trades from Global Macro Strategy - France could break the ECB cycle: Rec ECB vs Fed and sell EUR crosses (08-Oct-26):

Rec ECB vs pay Fed via long ERZ7 vs short SFRZ7 at 1.40% spread. Spot reference: 139bp as of 08-Oct-26 16:25 EST. Risks include weaker US data, improved European economic and fiscal picture. *Trade idea owned by Adam Pickett.*

Sell EUR vs GBP, JPY, CHF, AUD, NZD, NOK, vol weighted, via 3m forwards. Spot reference: 0.84767, 177.04, 0.93237, 1.61113, 2.0011, 10.7241 as of 16:25 EST as of 08-Oct-26. *Trade idea owned by Adam Pickett.*

Buy 3m (11-Jan-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 10.50%. Spot reference: EURUSD 1.1215, USDKRW 1342.75 as of 16:25 EST as of 08-Oct-26. Risks include better Eurozone outlook, weaker semi cycle. *Trade idea owned by Adam Pickett.*

Buy 9m (09-Jun-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 11.50%. Spot reference: EURUSD 1.1215, USDKRW 1342.75 as of 08-Oct-26 16:25 EST. Risks include better Eurozone outlook, weaker semi cycle. *Trade idea owned by Adam Pickett.*

New trades from Global Macro Strategy - The chase is on: Adding to Brazil risk (05-Oct-26):

Buy NTNF 2031s at 12.90 in 5k DV01, FX unhedged. Spot reference: 12.568 as of 08-Oct-26 16:23 EST. Risks to the trade include global duration sell-off, Lula winning second round.

Buy BZ1 Index at 208990 in 5.06mio. Spot reference: 206555 as of 08-Oct-26 16:23 EST. Risks to the trade include global risk-off, Lula winning second round. *Trade Idea owned by Vinh Vo.*

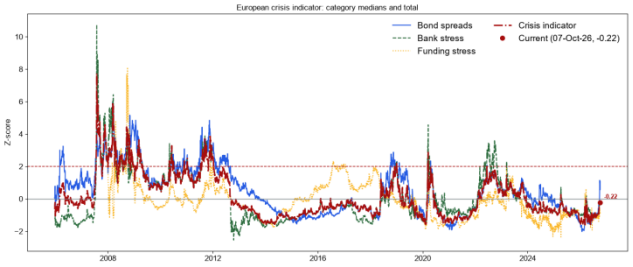

Note: Futures trading involves substantial risk of loss.

A French problem, not a European one

Our European stress indicator is not close to warning levels. While OATs had been widely seen at risk going into the election, the current spike has surprised markets, given how early it has happened relative to the election date. The extent of the spike also has raised eyebrows, as French spreads are back to levels seen during the European debt crisis in 2011. The case of OATs has been discussed by our European strategists here: European Rates Weekly - What to do about OATs?. But a focus on just France is limiting when comparing today with 2011. We therefore build a broader European stress indicator. We use data from sovereign yields (GDP weighted spread to Bunds), banks (iTraxx Senior Financials, spliced with a pre-2012 median z-score signal from major European bank CDS to extend history), and funding pressures (EURUSD 1y cross-currency basis). Each of these three categories is normalized as a rolling 5-year z-score and the final headline series is the median of those categories. We find that so far, spreads in France notwithstanding, the index is at benign levels.

Prepared for Hsin-Hung, Mark Wang

Figure 1. Our stress indicator (in reference to the European debt crisis in 2011) is the median of sovereign spreads, bank stress, and funding stress

Source: Citi Research

France and Belgium most vulnerable to higher yields. While so far still benign, there is a question of how the problem may evolve. We would note that contagion from France to the rest of the Eurozone has clearly started and that the widening will most likely be generalized. Having said that, we also check which market is fundamentally most vulnerable. We do this by using the June forecast from the European Commission for budget deficits, debt levels and growth to get a sense of how much debt would have grown with rates at the January 1 levels. As we are only interested in a relative ranking, we assume, for simplicity's sake, that the whole debt stock gets refinanced immediately, although this is obviously not correct. We then add 100bp to the January yields to see where the outlook deteriorates the most with higher rates. This seems a sensible approach as a hawkish ECB is at least contributing to the problem by pushing rates higher and we want to know where it matters the most. We do not account for that growth may eventually be undermined by the higher rates – something that was at play in 2011. On this basis, the countries where debt/GDP would rise the most are France and Belgium, followed by Finland, Austria and Germany, which have a much stronger starting point, though. The incremental impact from another 100bp is highest in France, Italy, Belgium and Greece, but in Greece it is in the context of debt falling by less.

Figure 3. France and Belgium with the most worrisome impact from rising yields

Delta Debt is the change in debt as a % of GDP if refinanced at Jan 1 yields, Impact of 100bps high yield also as a % of GDP

Source: Citi Research, European Commission

Prepared for Hsin-Hung, Mark Wang

Likely a less dire situation than in 2011, but not for France? Running the same exercise with 2011 numbers shows that the situation was much more dire, especially in Greece, Ireland, Spain and Portugal, where debt/GDP would have risen by multiples of the current simulation. Interestingly, though, both for France and Belgium, the numbers now are more worrisome than back then, but far below the Greece/Ireland/Spain and Portugal levels. Also interestingly, back then Germany, Austria and Finland had the most positive outlook, so at the extremes, there has been a major change. Big improvements in Greece/Ireland/Spain and Portugal, compared to significant deterioration in Germany/Austria and Finland. Italy is roughly similar.

Figure 4. The 2011 situation was more dire, for some

Sovereign-Banking Doom loop not relevant this time around. The other mitigating factor is that in 2011, losses on government bonds put pressure on the banking system, given significant holdings in countries like Italy. This time around, as long as France remains the focus, this doom loop may not be active. Essentially, holdings of French bonds as % of the balance sheet of French banks remains quite contained (though the EUR value of those positions has increased steeply). The same is true for Belgium. As a side note, in Italy, banks now hold more Italian bonds on their balance sheets than they did in the early days of the European debt crisis. A spillover to Italy would therefore be more concerning from the banks' perspective. **Overall, we see the 2011 comparison as somewhat reassuring, even before taking into account the new tools that Europe has at its disposal. Having said that, France and Belgium are likely to remain in a difficult spot, and it is not obvious what will generate lasting relief ahead of the French election.**

Receiving ECB vs Fed is the A-trade. Even without a fully-fledged contagion a la 2011, there could be tradable implications of the French fiscal worries. In particular, we see a clear shift in the balance of FCI vs inflation concerns at the ECB. This raises the likelihood that ongoing fiscal risks in France could cause an ECB pause after the December meeting, and possibly beforehand if we see contagion. Citi Rates Strategy team outlines that the relationship between ECB pricing and OAT-Bunds has started to reverse, implying the ECB is overtightening (Figure 6). CitiFX Strategy suggests a further EURUSD undershoot vs 2y rate spread implied fair value could target a move below 1.10 (Figure 7). With an ECB hike almost fully priced for December and another 2 hikes almost full priced for 2027, this leaves room for 50-75 bps of repricing in ECB vs Fed, all else equal. Our own basic 2y model suggests that even without a FV undershoot, a 50-75bps reduction in 2y EUR vs USD rate spread leaves EURUSD around 1.1075-1.1000 (Figure 8, Figure 9). So fiscal risk premia, or a more dovish ECB responding to this, or a combination of both, could drive EUR FX lower. We think receiving ECB vs Fed is the A-trade because it should continue to work during, and will be helped by, an Iran resolution. Selling French equities, OATs or EURUSD is unlikely to work if we see much lower commodity prices.

Slower rates hikes, not intervention. We think the use of TPI to calm French spreads is highly unlikely given the main conditions for use outlined by the ECB include not being subject to an Excessive Deficit Procedure and fiscal sustainability, both of which don't apply to France. Citi's European Rates Strategy team has also suggested reconsidering the pace of QT or flexible reinvestments as per PEPP, but we think slowing rate hikes first is easier to justify on economic grounds. Bank of France head Moulin pushed back on ECB intervention in OATs (07 Oct, Reuters).

Prepared for Hsin-Hung, Mark Wang

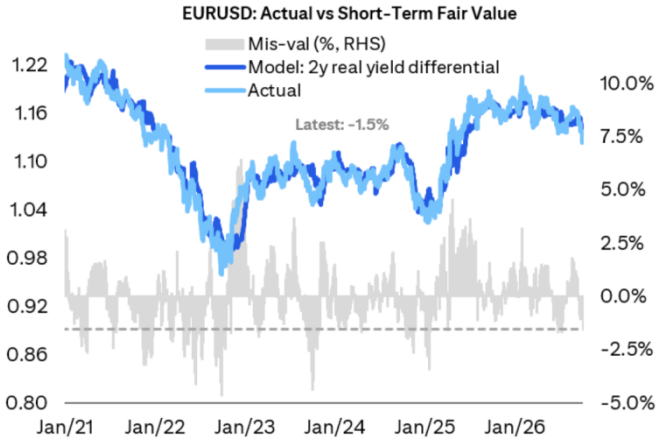

Figure 6. The initial catalyst for wider OAT-Bund was likely ECB hike premium. The relationship may be inverting on policy error concern (European Rates Weekly - What to do about OATs?)

Source: Citi Research, Bloomberg

EUR is not weak, USD is strong. Sell EUR vs G9 x USD and SEK. Looking at the move lower in EURUSD since the August highs around Jackson Hole, it's easy to think EUR FX is weak. We disaggregate the move into EUR vs G9 ex-USD and USD vs G9 ex-EUR. The former is down less than 1% with the latter up nearly 4%. Performing the same exercise vs EM gives a more balanced split, but still the USD outperformance has been stronger than the EUR weakness, suggesting that idiosyncratic EUR FX weakness has not been the dominant driver, yet. The conclusions are the same using equal weighted and vol weighted baskets. This leaves room for further EUR weakness on the crosses. We like insolating the EUR short this way because, as discussed, short EURUSD is vulnerable to any better news on Iran or commodity prices, which is an ever-present risk. We sell EUR vs G9 ex-USD and SEK, as it gives us a clean exposure to short EUR with good aggregate entry.

EURKRW lower via USD is a nice correlation opportunity. We see EURKRW as a nice energy-neutral RV play, where KRW also has idiosyncratic upside to pair with EUR idiosyncratic fiscal risk. In Korea, the structural demand for chips is significantly boosting GDP, according to Citi Economists. This can structurally boost Korea's current account surplus via a historically robust export channel. For more, see South Korea Economics - Chip-led Economic Expansion to Persist for 2026-2028 and Global Semiconductors - HBM Market to Face Severe Undersupply in 2027E–2028E Despite De-spec Concerns. In correlation space, EURKRW via USD is priced above +40% implied correlation. Selling the USD correlation via EURUSD down, USDKRW down dual digitals gives a healthy discount of ~67% vs the cheapest individual digital compared to doing the equivalent EURUSD and USDKRW digital puts separately.

New trades from Global Macro Strategy – France could break the ECB cycle: Rec ECB vs Fed and sell EUR crosses (08-Oct-26):

Rec ECB vs pay Fed via long ERZ7 vs short SFRZ7 at 1.40% spread (08:30 UKT). Spot reference: 132.5bp as of 08-Oct-26 16:25 EST. Risks include weaker US data, improved European economic and fiscal picture. *Trade idea owned by Adam Pickett. Note: Futures trading involves substantial risk of loss.*

Sell EUR vs GBP, JPY, CHF, AUD, NZD, NOK, vol weighted, via 3m forwards. Spot reference: 0.84767, 177.04, 0.93237, 1.61113, 2.0011, 10.7241 as of 16:25 EST as of 08-Oct-26. *Trade idea owned by Adam Pickett.*

Buy 3m (11-Jan-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 10.50%. Spot reference: EURUSD 1.1215, USDKRW 1342.75 as of 16:25 EST as of 08-Oct-26. Risks include better Eurozone outlook, weaker semi cycle. *Trade idea owned by Adam Pickett.*

Buy 9m (09-Jun-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 11.50%. Spot reference: EURUSD 1.1215, USDKRW 1342.75 as of 08-Oct-26 16:25 EST. Risks include better Eurozone outlook, weaker semi cycle. *Trade idea owned by Adam Pickett.*

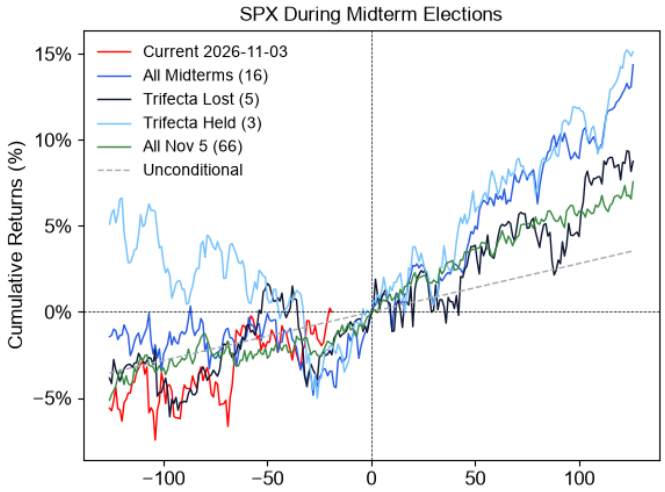

Equities into year-end

The expected pullback happened in valuations, but not in index levels. We had discussed that there is typically a pullback going into the US Midterms, as well as around the first Fed hike. Figure 10 and **Figure 11** show how we are currently tracking on the Midterm front. While the index pullback was very shallow and short-lived, valuation did fall, even though that was offset by very strong earnings growth. Furthermore, the usual pocket of weakness into the Midterms comes to an end right around now, suggesting that the market may be ready to look through Midterm fears. With respect to the Fed, **Figure 12** illustrates that the pullback post first Fed hike is typically longer lasting, though. And going again into valuation space shows that so far we are tracking more closely. As we highlighted last week, the fact that US rates volatility (MOVE) has moved higher is somewhat of a warning sign. For us, it is more yellow light than red light, especially considering also that

Prepared for Hsin-Hung, Mark Wang

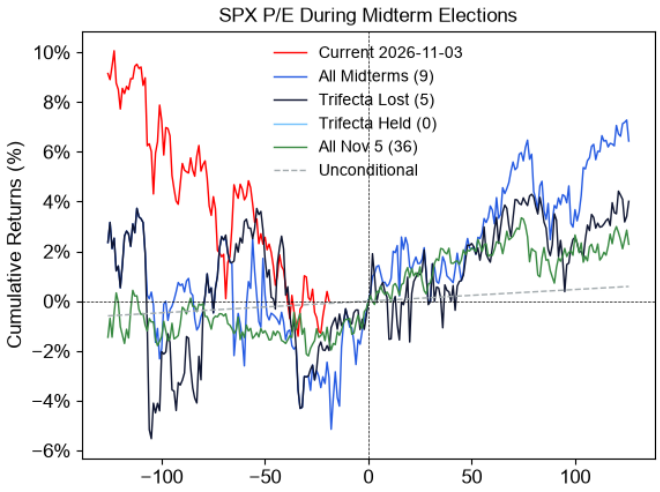

volatility spikes in rates are typically not that long lasting, and so far the equity performance in light of higher rates volatility has been impressive.

Seasonals improved for October, and much improved for Nov/Dec. The other positive is that we were able to get through an often-treacherous September period with only minimal fallout, even as both oil and rates were strong headwinds. Just with respect to trading seasonals, investors now have a choice to make. Either add equity risk at the end of September, i.e. now, or wait for the end of October, to have the normal year-end statistics kick in. As shown in Figure 14, October seasonals are much better than September, but it takes good performance from Jan to the end of October to make the Nov/Dec returns very consistently positive, as per Figure 15. The advantage to front run the Nov/Dec seasonality is that the

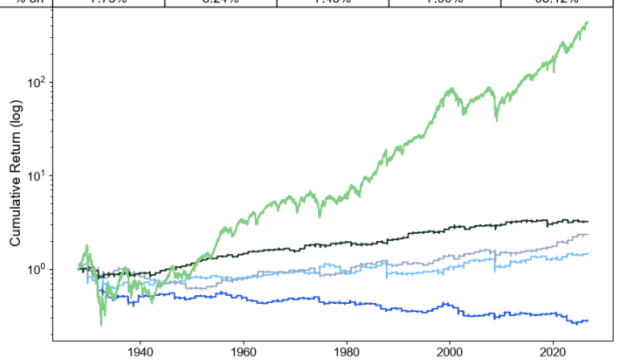

Prepared for Hsin-Hung, Mark Wang

performance during the first half of the earnings season (excluding the first week) is usually very strong, as per Figure 16. Post earnings season (i.e. November), is similarly strong.

Figure 14. October beats September, but November and December with best seasonals

We stay long equities. Having added Brazil this week (more on this below), we are now exposed through our SPW trade, Brazil as well as our NDX call for December. We are also overweight US and Brazil in GAA. We have capacity to add additional equity risk, but we would be biased to double up at the end of October, for the potential year-end rally. The main risk to this strategy is that President Trump restarts a kinetic war in Iran.

Figure 16. Best performance during early part of earnings season, and post earnings season

Brazil: The Chase is On

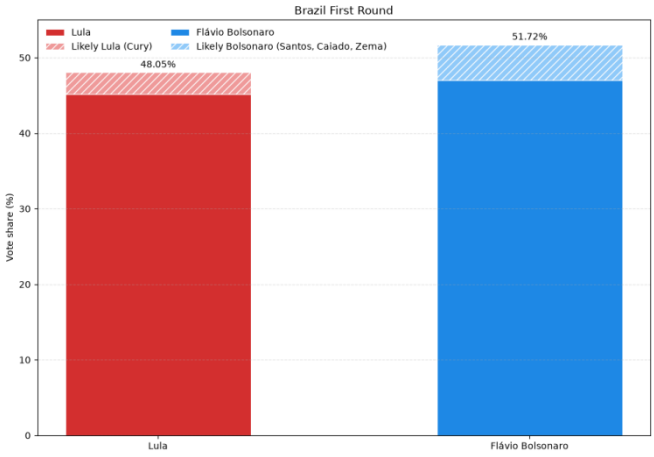

First round election results favorable for markets. We were long BRL into the election and on Monday, we added Bovespa and 2031 NTNFs to our portfolio after the market-friendly first-round election results, which showed Bolsonaro outperforming polling. Prediction markets now price a nearly 90% probability of a Bolsonaro second-round win on October 25th as most third-party votes lean towards the right. Bolsonaro is the more market-friendly candidate, promising fiscal austerity, privatization, deregulation, and VAT cuts. Consequently, we saw 5STD+ moves across Brazilian assets on Monday. His party's strong Senate showing should ease passage of his legislative agenda, which would include more policies favored by investors compared to the last Bolsonaro presidency. Given that there was a country-wide move away from PT (Lula's party), we think it is highly unlikely Lula will win the second round. Today, a new poll from PoderData shows Bolsonaro leading 53 vs 47 in the second round. The same polls show 54% of voters expecting Bolsonaro to win. Thus, we see further bullish follow-through that is bullish for markets.

The bull case. Other than just a generally more business-friendly administration, the bull case for Bovespa is also that rates would likely fall more than priced. One reason for the economy not reacting to higher rates was fiscal stimulus. If that can be pared back, rates could be cut more aggressively. Investors have already priced in a much lower terminal rate and more can be priced. If Bolsonaro delivers on a 2% of GDP initial fiscal adjustment (Bloomberg, 08 Oct), we expect Copom to cut further and term premium could continue to come down. With the election out of the way, the BRL would likely keep attracting carry inflows, even as rate cuts get more aggressive. Typically, it takes very significant cuts before a dovish central bank undermines the FX carry trade. Figure 19 shows that the information ratio for Bovespa during easing cycles is much higher than during hiking cycles, or when COPOM is on hold. Lastly, the terms of trade for Brazil also remain strong with oil prices supported by the Iran war, and soft commodities strong on the back of El Nino, which have pushed EPS meaningfully higher (see Figure 20). We therefore bought both the Bovespa and NTNF 2031s (FX unhedged).

Brazil follows Hungary and Colombia to have another bullish EM election. The Brazil situation reminds us of the Hungary and Colombia elections earlier this year, where the market-friendly candidate won and triggered a bullish reaction across all assets. In Figure 21, we show the STD moves in 5y bonds after the Hungary and Colombia elections. The initial moves were less than half of the total rallies in the first 30 trading days. After some consolidation in the first few days, the rallies continued. Assuming the market-friendly candidate won, this should be bullish for the Brazil belly.

Figure 21. The belly has more room to go

New trades from Global Macro Strategy - The chase is on: Adding to Brazil risk (05-Oct-26):

Buy NTNF 2031s at 12.90 in 5k DV01, FX unhedged. Spot reference: 12.568 as of 08-Oct-26 16:23 EST. Risks to the trade include global duration sell-off, Lula winning second round.

Buy BZ1 Index at 208990 in 5.06mio. Spot reference: 206555 as of 08-Oct-26 16:23 EST. Risks to the trade include global risk-off, Lula winning second round. *Trade Idea owned by Vinh Vo.*

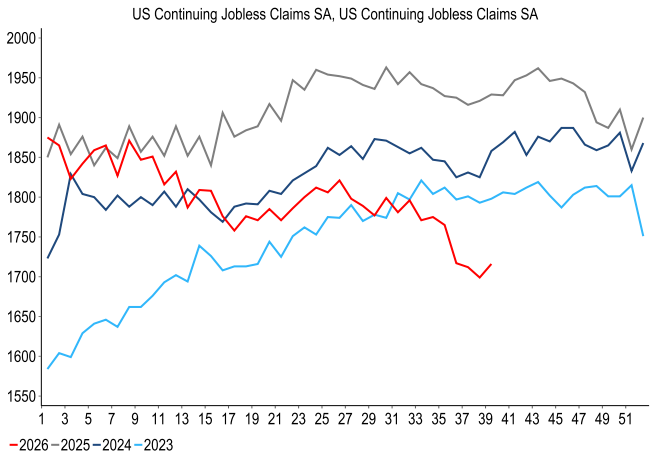

Note: Futures trading involves substantial risk of loss.

AI and the labor market

Stable labor market. Recent data shows modest payroll growth and a stable unemployment rate. The feared seasonal trend in unemployment has not shown up this year. Multiple Fed officials have highlighted that the economy is broadly at "full employment" and are focused squarely on inflation. We see no reason to disagree. Higher frequency data like initial claims are sitting at unconcerning levels and continuing claims are close to their lowest levels in years. Continuing claims directly feed into unemployment and suggest unemployment is likely to stay benign from here.

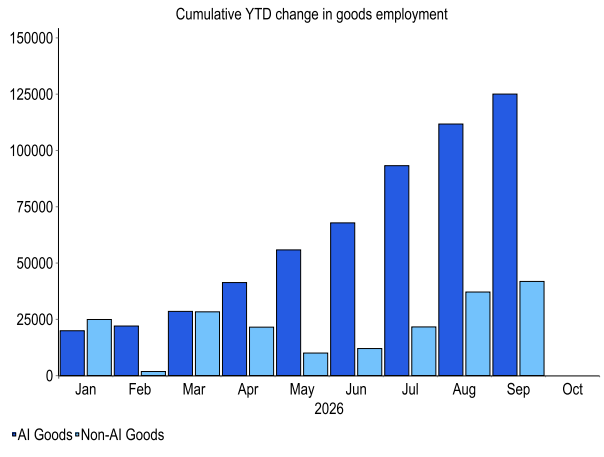

AI goods employment is very strong. One source of strength has been the AI buildout, evident in construction spending data, import data, and labor market data. Figure 23 shows YTD change in payrolls separated by AI-related goods and non-AI goods. AI-related goods employment, classified as nonresidential specialty construction, computer, electronic, and fabricated metals manufacturing, has accounted for close to a quarter of total payrolls growth YTD and nearly all goods employment growth. Even in the latest Fed minutes, it was noted that "some participants observed that strong demand for skilled workers in sectors related to the ongoing AI buildout had been driving strong wage gains for these workers." Employment is a leading indicator of sector demand, and its strength suggests continued demand.

Jevons job market still in the early days. In Global Macro Strategy - Views and Trade Ideas - Jevons jobs market? And what to buy if the Strait reopens, we discussed how important it was to get the "jobpocalypse" (AI as a labor replacement) vs Jevons paradox (AI as a labor complement) debate correct. A stable labor market points more towards Jevons paradox. Recent news has been quiet on AI related job cuts. The latest few Challenger job reports showed a decline in AI as a reason for job cuts. High frequency job data shows software hiring has continued to pick up after the bottom in 2025. While some of the hiring could be on the back of 'software engineers being cheaper than tokens', we think more job postings is at the very least against a "jobpocalypse".

Evidence of AI-related job losses exists but appears small. Several academic papers (Stanford's being the most widely cited) show that AI may act as a complement to labor at the senior level but replacement at the junior level. This is especially evident in software engineers (Figure 26), where early career employment has plummeted since the release of ChatGPT. In general, there has been no widespread impact on the labor market. The same researchers also noted that more AI-exposed sectors show less headcount growth (as opposed to actual headcount losses, Figure 27). But it is still early. Adoption has not yet reached peak yet. The October BTOS (Business Trends and Outlook Survey) still shows that less than 25% of firms currently use AI and even in the highest usage sector (information technology), it is less than 50%. **This means that the jobpocalypse hypothesis is so far still false, but it will be important to follow the evidence to see if it gains traction in 2027 and beyond.**

Regarding Options

The portion of this research report regarding non-OCC issued options is not intended for US clients other than Qualified Institutional Buyers. Investing in options is not suitable for all investors. Please see the disclosures concerning the risks of investing in options below and discuss with your Financial Advisor whether this particular options strategy is suitable for you. Note that all option prices are indications, based on prices as of 9 October. Interested investors should contact our trading desk for updated price and liquidity information. Also, complex option strategies may entail higher commissions costs. Note that one or more of the following trade ideas are intended for OTC transactions only.

Please contact us for further details on the options recommendations that appear in this note.

Prepared for Hsin-Hung, Mark Wang

Note that the following trades are intended for OTC transactions only.

Buy 1y (18-Dec-26) 32,000 NDX digital call. Risks to trade include AI bubble bursting, excessively hawkish Fed, US recession risks. ***Trade idea owned by Vinh Vo.***

Buy 23-Dec-2026 USD denom Dual Digi SX5E < 98.83%, COG7 > 122% (09-Sep-2026). *Risk to trade includes Faster-than-expected normalisation of global oil flows/a quick resolution in US-Iran tensions.* ***Trade idea owned by Vinh Vo.***

Buy 18Mar27, JPY Denom Dual Digi USDJPY < 150.00, JPY20YTONAR < ATMS-0.200% at 11.85% (vs USDJPY Digi 24% and JPY20YTONAR Digi 32%). *Risks to trade: no changes to GPIF allocation, further repricing hawkish of the Fed.* ***Trade idea owned by Giammarco Miani.***

Buy BZ1 Index at 208990 in 5.06mio. *Risks to the trade include global risk-off, Lula winning second round.* ***Trade Idea owned by Vinh Vo.***

Buy 3m (11-Jan-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 10.50%. Individual digitals EURUSD 35% and USDKRW 42%. *Risks include better Eurozone outlook, weaker semi cycle.* ***Trade idea owned by Adam Pickett.***

Buy 9m (09-Jun-27) EURUSD < 1.1150, USDKRW < 1325 dual digital at 11.50%. Individual digitals EURUSD 35% and USDKRW 46%. *Risks include better Eurozone outlook, weaker semi cycle.* ***Trade idea owned by Adam Pickett.***

RISKS: When buying calls and puts (or receivers and payers) the maximum loss is the premium paid. When selling calls (or receivers), the maximum potential loss would occur as the index spread decreases but is limited by the index spread being floored at zero. For puts (or payers), the maximum potential loss (amount below the strike) would eventuate should the index price fall to zero. Sector index options are cash settled. Credit index options are physically settled. The above calculations do not include any additional fees or transaction costs. Note that ratio writing would leave the writer uncovered in one leg of the trade.

Options Risk Disclosure - Please Read Carefully
This section discusses possible options strategies that you may choose to employ in conjunction with the company securities discussed herein. If you choose to engage in the options transactions discussed within this document, you must have an approved options account and will be subject to certain criteria which may ultimately prevent you from engaging in certain option strategies. It is important for you as an investor to know and understand that Options do involve risk and sometimes, significant risk, therefore may not be appropriate for all investors. If you buy options, the maximum loss is the premium. If you sell put options, the risk is the entire notional below the strike. If you sell call options, the risk is unlimited. The actual profit or loss from any trade will depend on the price at which the trades are executed. The prices used herein are historical and may not be available when your order is entered. Commissions and other transaction costs are not considered in these examples.
Please speak to your Financial Advisor to ensure you have a full understanding of the risk and reward of the strategy you are considering. Strategies that are opened or closed differently than what is discussed in this document could have a significantly different outcome from what is described. It should be noted that certain Index options might have special settlement dates or settlement requirements that are different from traditional equity options. Commissions, taxes, and margin costs have not been included but will affect the outcome of any option transaction and should be considered. However, they can have a significant impact on the profitability of options transactions and should be considered carefully before entering into any option strategy. Because of the importance of tax considerations to all option transactions, the investor considering options should consult with his/her tax advisor as to how their tax situation is affected by the outcome of contemplated options transactions. Certain options trades/strategies must be executed in a margin account. Transactions executed in a margin account can require the investor to periodically deposit additional collateral into the account in order to maintain the positions. The preceding language is not a full description of all possible risks associated with options trading.
For a more complete description on the uses and risks of options, please see the document titled Characteristics and Risks of Standardized Options. If you would like an additional copy of this document please contact Citigroup Global Markets Inc., Options Department, 390 Greenwich Street, New York, NY 10013. Options are not suitable for all investors. Before entering into any transaction using listed options, investors should read and understand the current Options Clearing Corp. Disclosure Document (Characteristics and Risks of Standardized Options) at https://www.theocc.com/getmedia/dd6200a7-5982-4226-90e4-1f2d32a89911/june_2024_riskstoc.pdf. Investing in options other than Standardized Options may entail additional risks.

Appendix A-1

ANALYST CERTIFICATION

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or

Prepared for Hsin-Hung, Mark Wang

rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

(For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For financial instruments recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in such financial instruments (and any underlying instruments) and may act as principal in connection with transactions in such instruments. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 6th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at

Prepared for Hsin-Hung, Mark Wang

https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

RESEARCH ANALYST AFFILIATIONS / NON-US RESEARCH ANALYST DISCLOSURES

The legal entities employing the authors of this report are listed below (and their regulators are listed further herein). Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization (but are employed by an affiliate of the member organization) and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Citigroup Global Markets Inc.	Dirk Willer; Alice Zheng; Alex Saunders
Citigroup Global Markets Limited	Vinh Vo; Adam Pickett; Giammarco Miani

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. Please refer to the trade history in the published research or contact the research analyst.

Citi Research has implemented policies for identifying, considering and managing potential conflicts of interest arising as a result of publication or distribution of investment research. A description of these policies can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows; Q2 2026 Buy 33%(63%), Hold 44% (51%), Sell 23% (49%), RV 0.5% (87%): Q1 2026 Buy 33% (63%), Hold 44% (52%), Sell 23% (46%), RV 0.5% (89%); Q4 2025 Buy 33% (63%), Hold 44% (50%), Sell 23% (46%), RV 0.4% (91%); Q3 2025 Buy 33%(61%), Hold 44% (52%), Sell 23% (50%), RV 0.4% (80%). For the purposes of disclosing recommendations other than for equity (whose definitions can be found in the corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from LSEG Data & Analytics. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Please be advised that pursuant to Executive Order 13959 as amended (the "Order"), U.S. persons are prohibited from investing in securities of any company determined by the United States Government to be the subject of the Order. This research is not intended to be used or relied upon in any way that could result in a violation of the Order. Investors are encouraged to rely upon their own legal counsel for advice on compliance with the Order and other economic sanctions programs administered and enforced by the Office of Foreign Assets Control of the U.S. Treasury Department.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail

Prepared for Hsin-Hung, Mark Wang

clients or to non-Eligible Clients. The presenter is not licensed as investment advisor or investment marketer by the Israeli Securities Authority ("ISA") and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this communication may not be offered or sold to any Israeli person except pursuant to a security offering exemption according to the Israeli Securities Law, 1968and the public offering rules provided thereunder.

Citi Research broadly and simultaneously disseminates its research content to the Firm's institutional and retail clients via the Firm's proprietary electronic distribution platforms (e.g., Citi Velocity and various Global Wealth platforms). As a convenience, certain, but not all, research content may be distributed through third party aggregators. Clients may receive published research reports by email, on a discretionary basis, and only after such research content has been broadly disseminated. Certain research is made available only to institutional investors to satisfy regulatory requirements. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Resolução 20 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. Statements and views concerning ESG (environmental, social, governance) factors are typically based upon public statements made by the affected company or other public news, which the author may not have independently verified. ESG factors are one consideration that investors may choose to examine when making investment decisions. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Citigroup legal entity that takes responsibility for the production of the Product is the legal entity which the first named author is employed by.

Prepared for Hsin-Hung, Mark Wang

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.
Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested.The yield and average life of CMOs (collateralized mortgage obligations) referenced in this Product will fluctuate depending on the actual rate at which mortgage holders prepay the mortgages underlying the CMO and changes in current interest rates. Any government agency backing of the CMO applies only to the face value of the CMO and not to any premium paid. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Card Insights. Where this report references Card Insights data, Card Insights consists of selected data from a subset of Citi's proprietary credit card transactions. Such data has undergone rigorous security protocols to keep all customer information confidential and secure; the data is highly aggregated and anonymized so that all unique customer identifiable information is removed from the data prior to receipt by the report's author or distribution to external parties. This data should be considered in the context of other economic indicators and publicly available information. Further, the selected data represents only a subset of Citi's proprietary credit card transactions due to the selection methodology or other limitations and should not be considered as indicative or predictive of the past or future financial performance of Citi or its credit card business.

Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes the Firm's estimates, data from company reports and feeds from LSEG Data & Analytics. The source for all referenced prices, unless otherwise stated, is DataCentral. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance. The printed and printable version of the research report may not include all the information <(e.g. certain financial summary information and comparable company data) that is linked to the online version available on the Firm's proprietary electronic distribution platforms.
Where included in this report, MSCI sourced information is the exclusive property of Morgan Stanley Capital International Inc. (MSCI). Without prior written permission of MSCI, this information and any other MSCI intellectual property may not be reproduced, redisseminated or used to create any financial products, including any indices. This information is provided on an "as is" basis. The user assumes the entire risk of any use made of this information. MSCI, its affiliates and any third party involved in, or related to, computing or compiling the information hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of this information. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in, or related to, computing or compiling the information have any liability for any damages of any kind. MSCI, Morgan Stanley Capital International and the MSCI indexes are services marks of MSCI and its affiliates. Where data is attributed to Morningstar that data is © 2026 Morningstar, Inc.
